## DETAILED ACTION

### *Specification*

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because lines 1 and 6 contain phrases which can be implied and the abstract is more than one paragraph. Correction is required. See MPEP § 608.01(b).

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP58-218143 in view of JP08-130237 and further in view of applicant's admitted prior art..

JP58-218143 discloses a ceramic substrate for use in semiconductor manufacture wherein the level of  $\alpha$ -rays radiated is between 0.25-50 c/cm<sup>2</sup>-hr (abstract). JP58-218143 does not disclose an electrostatic chuck, a temperature measuring means, and a ceramic heater with a heating element disposed therein. JP08-130237 discloses an electrostatic chuck and temperature measuring means (abstract), and applicant discloses a ceramic heater with a heating element disposed therein (specification, page 2, lines 9-19). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included the ceramic substrate of JP58-218143 in the electrostatic chuck with temperature measuring means of JP08-130237, and ceramic heater of applicant's admitted prior art because a ceramic substrate wherein the level of  $\alpha$ -rays is between 0.25-50 c/cm<sup>2</sup>- hr significantly reduces defects in the substrate.
